

EXPERIMENT 2: QUALYS USER CREATION WITH ROLES CONFIGURATION

1. Aim

To create a new user in the Qualys Cloud Platform and configure the user role, business unit and asset group access.

2. Introduction

Qualys uses role-based access control. Each user is given a role that decides which modules and actions are available. This follows the principle of least privilege, so that users can see and do only what their job needs. The main roles are summarised below.

Table 1: Qualys user roles

Role	Main privileges
Manager	Full access to all users, assets, scans and settings of the subscription
Unit Manager	Manages users and assets only inside the assigned business unit
Scanner	Launches scans and views results for assigned asset groups
Reader	Read-only access to reports and scan results for assigned asset groups
Contact	Receives notifications and reports by email, usually without login
Auditor	Works with compliance reports and policies

3. Requirements

- A Qualys account with the Manager role (only a Manager or Unit Manager can create users)
- Web browser with internet access
- A valid email address for the new user

4. Procedure

- Log in to the Qualys Cloud Platform and open the **Administration** module from the module menu.
- Open the **Users** tab and click **New > User**.
- Under General Information enter the first name, last name, title and email address.
- Open the **User Role** section, choose the role (for example Scanner or Reader), select the business unit and tick the permissions needed.
- Assign the required **Asset Groups** so the user can access only those hosts.
- Under Options choose the allowed access type (web interface and/or API) and the notification settings.
- Click **Save**. Qualys sends an activation email with a login link to the new user.

- The user opens the link, sets a password and logs in. Verify that only the permitted modules are visible.

Menu names can vary slightly between Qualys versions.

5. Output

Figure 1: User creation workflow

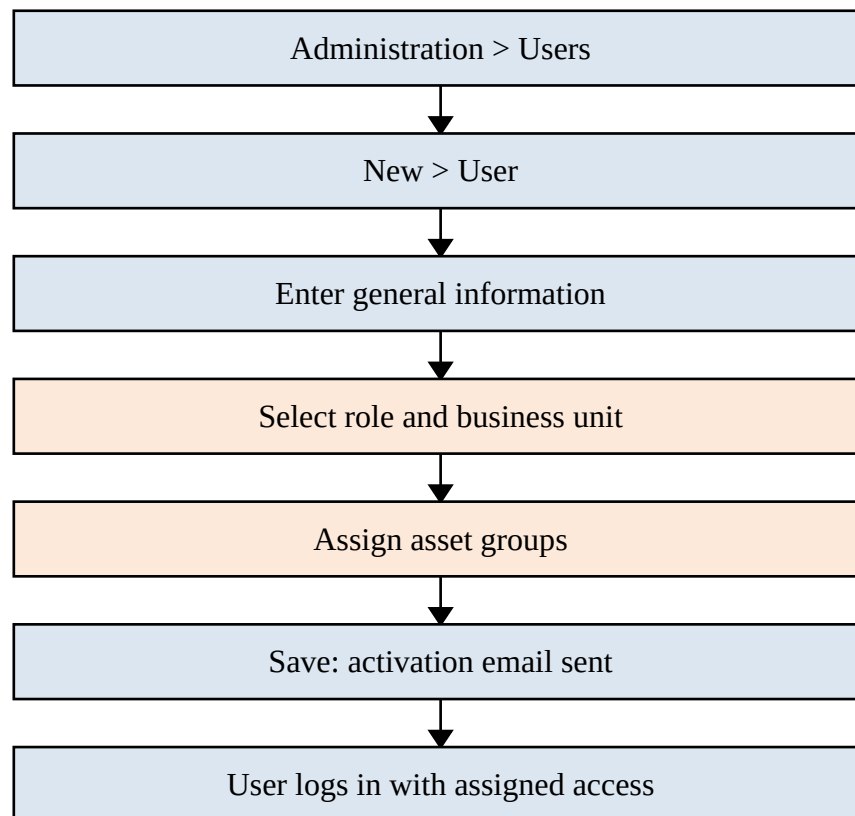

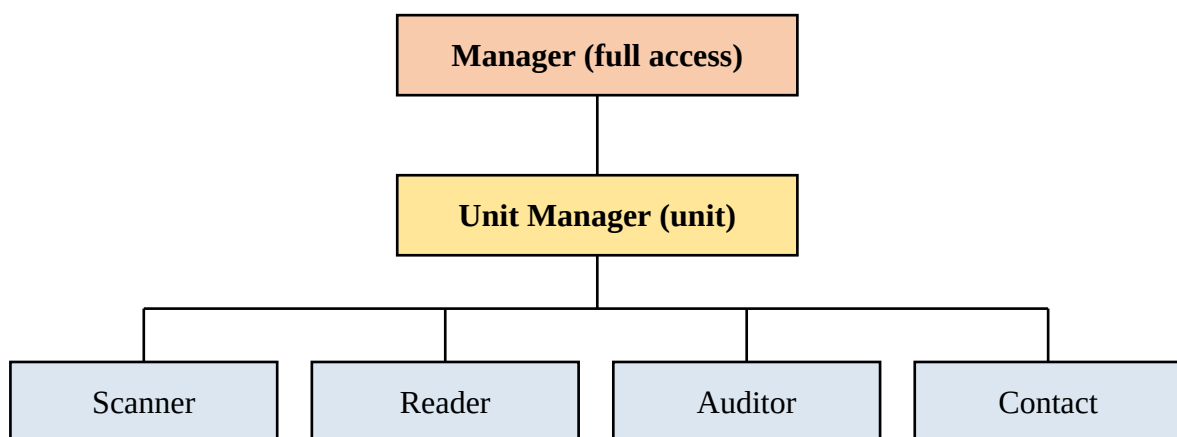

Figure 2: Role hierarchy and access level

Higher roles have wider privileges

Figure 3: Users list after creation (illustrative)

Name	Role	Business unit	Asset group	Status
Renuga Devi K	Scanner	Unassigned	Lab Servers	Active
Sample Reader	Reader	Unassigned	Lab Servers	Pending activation
Sample Auditor	Auditor	Unassigned	All	Active

Note: The figures show the expected structure of the output. Exact names, values and screens may differ in your own environment and software version.

6. Result

A new Qualys user was created, assigned a role, business unit and asset groups, and the access granted was verified after the user logged in.
